Completion of car park and stormwater upgrade at Camden Airport

Aeria Management Group (AMG) is pleased to confirm the successful completion earlier this month of our major car park and stormwater upgrades at Camden Airport.

The works have delivered a safer and more efficient airport precinct for our customers and all airport users, as part of AMG's ongoing investments in general aviation.

Thank you to our customers and other airport users for working with us to improve safety, accessibility and amenity.

The works were staged to minimise disruptions and took place from late 2023 to May 2024. The project included an upgrade of the stormwater system to improve water drainage and the resilience of airport operations, infrastructure and facilities against floods.

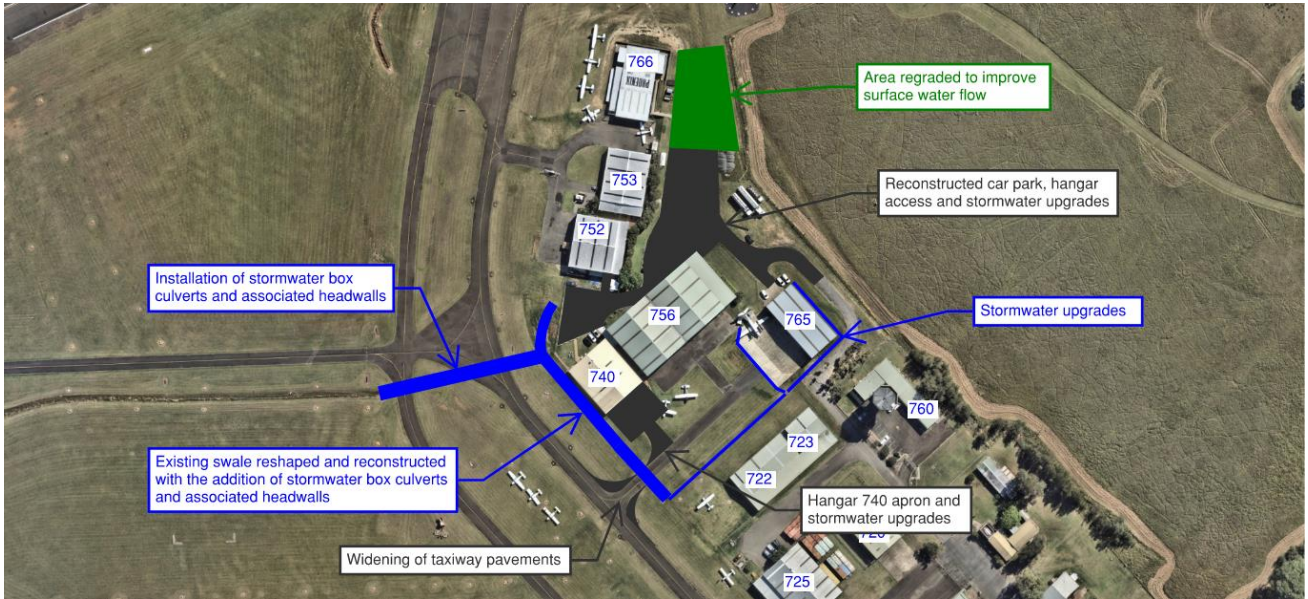

The works also included:

- Reconstruction and resurfacing of the airport car park
- An upgrade of the car park access road
- Upgrades to aprons, hardstand and hangar access
- Widening of the taxiway to improve safety for turning aircraft.

The efficient delivery of works enabled the early reopening of Taxiway Delta, in February, and reopening of Taxiway Charlie, in March, despite the challenges of recent poor weather.

The scope, scale and successful completion of the works are shown below.

Thank you again to our customers and the broader Camden Airport aviation community for your cooperation and patience during the works.

We would also like to thank our works partners Civilcraft and RP Infrastructure.

For further information about the project, please contact your AMG Property Manager or visit our website: <https://aeria.co/news/camden-car-park-and-stormwater-upgrades/>
